PULSE LINE MILKING MACHINE

PULSE
Line
EFFICIENT RESULTS

Reafrio's Pulse Line milking machine was designed in stainless steel concept, designed for farmers who seek to optimize their milking process, in time, productivity and milk quality.

- **Final unit** horizontal model with a capacity of 75-liters or 100-liters total in stainless steel;
- **Milk pump** with stainless steel cover and impeller, 9000-liters/h capacity with exclusive 50mm diameter choke system;
- High flow **milk filter** in stainless steel 304;
- **Electronic pulse**, measurement and extraction R501 standardizes the milking process, generating efficiency and animal comfort;
- **Vacuum pump** supported by the magazine system in capacities of: 1,200-liters, 1,400-liters, 2,000-liters and 3,000-liters. Engine with high service factor.
- **Milk tubing** (75mm) in stainless steel, and cleaning tubing (38mm or 50mm) external and internal polished;
- **Vacuum tubing** (75mm) in PVC;
- **Milk transfer** (38mm) in stainless steel, external and internal polished.
- **Control board** guarantees pump protection, automatic / manual activation and is compatible with Pulse Line cleaning programmer.

30% milking time: The Pulse Line system reduces milking time by up to 30% compared to other equipment under the same conditions.

*DUOVAC system is optional, standard configuration has one pump.
